Presentation of the website

It's a dynamic web site for a restaurant called **Tasty**.
The website enables users and customers to order online food, to book a table and to check the menu of the restaurant also they can review the pictures that are available on the website.
The purpose behind this type of website, is a better marketing for the restaurant also it helps increase sales and it makes their services accessible .

PROBLEM VS SOLUTION

PROBLEM

In the first year we lack the courses that we do need in an internship, especially if its web or mobile development internship

SOLUTION

I suggest we start at least learning Html and CSS in the first year of engineering instead of the second year

04

Conclusion

The internship was the push I need it to start self learning

I discovered the Environment of Companies

THANKS
